

The Cottage School

Wireless Access Permission Application

The Cottage School provides wireless access points throughout campus for the use of faculty and staff to connect to the internet for research purposes. That connection is for computer systems only, and not for PDA's such as iPhones, iPod Touch, or Blackberrys. Student laptops must have current antivirus software installed, and the wireless access key will be installed by Cottage School technology staff.

I hereby certify that the computer described below has a current Windows antivirus program installed, which has virus definitions up to date, and has recently successfully completed a full system scan. I am applying for my student to use this computer to access the internet via The Cottage School's computer network.
