

The Cottage School

Wireless Access Permission Application for Students

The Cottage School provides wireless access points throughout campus for the use of faculty, staff and students to connect to the internet for research purposes. That connection is for computer systems only (such as laptops, netbooks, tablets, readers, and iPads), and not for PDA's or smartphones such as iPhones, iPod Touches, or Blackberrys. Student owned computers must have current antivirus software appropriate to the device installed, and the wireless access key will be installed by Cottage School technology staff. That staff support is limited to installing the wireless key, and does not provide any other technical support for student owned devices.

I hereby certify that the computer described below has current antivirus protection and is up to date and current. I am applying for my student to use this device to access the internet via The Cottage School's computer network. Further, we have both read and discussed the Cottage School's internet policy, and acknowledge that violation of that policy will result in restriction of computer access and other disciplinary procedures as appropriate.
